PROFILE

BBA student building practical business-analysis skills through self-directed case work, published on my portfolio site. I break operational problems into hypotheses and likely drivers before recommending action. Currently learning financial modelling, data analysis and SQL.

PROJECTS

Business Case Analysis: Sales & Wastage

Self-directed practice case

- Investigated rising wastage, with over-purchasing and over-production as competing hypotheses.
- Looked at demand before concluding, instead of assuming the cause sat on the supply side.
- Recommended producing closer to actual demand to reduce wastage.

Business Case Analysis: Rising Operating Expenses

Self-directed practice case

- Investigated an increase in business expenses.
- Broke the problem into possible drivers: staff payments, wastage and sales.
- Used structured questioning and hypotheses to narrow down the likely cause.

Personal Portfolio Website

HTML · CSS · GitHub

- Designed and built my portfolio site from scratch using HTML and CSS.
- Brings together my education, skills, projects and business-analysis case studies in one place.
- Published on GitHub.
